| **Planting** | **Best in fall.** Dig 2–3× as wide as the root ball, no deeper; set it level. Space about 4 ft apart. |
| **Watering** | **First months:** keep the root ball moist, not soggy. **Established:** drought tolerant; soak in long dry spells. |
| **Soil & Mulch** | Well-drained soil. 2–3 in. of mulch, off the trunk. Ask us about Taylor's soil and mulch. |
| **Fertilizer** | **Water, not food, matters most at first.** Feed in spring only if growth is weak; use slow-release. |
| **Pruning** | **Prune lightly to shape;** flowering plants right after bloom. |
| **Lowcountry Tip** | Salt tolerant, a good pick near the coast. Deer usually leave it alone. Sandy soil dries fast, so check new plants often. |
