Lantana camara 'New Gold'

Plant care guide

SUN
Full sun · 6+ hrs

WATER
Low once established

MATURE SIZE
1–2 ft tall, 3–4 ft wide

BLOOM TIME
Spring to frost

USDA ZONE
8–11 · fits 8b/9a

Planting	**Spring,** at least 2 weeks after the last frost; it loves warm soil. Give it room: it spreads 3–4 ft wide, so space plants 3 ft apart. A butterfly magnet.
Watering	**First few weeks:** keep moist. **Established:** drought tolerant; soak weekly only if under 1 in. of rain. Skip overhead watering.
Soil & Mulch	Any well-drained, slightly acidic soil; sandy is fine. Soggy soil invites root rot. Ask us about Taylor's soil and mulch.
Fertilizer	**Needs little.** One light feeding in spring is usually enough. Too much fertilizer can cut blooms.
Pruning	**Cut back hard in March** to 6–12 in. Skip hard fall pruning. Lightly shear tips in summer for more blooms.
Lowcountry Tip	Leave winter-browned stems until March; it is generally reliably hardy on the coast. **Sterile:** no berries or seedlings. Toxic to pets and people if eaten; leaves may irritate skin.
