TAYLOR'S
LANDSCAPE SUPPLY & NURSERY

Pineapple Guava

Acca sellowiana

Plant care guide

SUN
Full sun to part shade

WATER
Low once established

MATURE SIZE
10–15 ft tall & wide

BLOOM TIME
April–May · fruit in fall

USDA ZONE
8–11 · fits 8b/9a

Planting	**Best in fall.** Dig 2–5× as wide as the root ball, no deeper; set it level or slightly high. Full sun gives the most flowers and fruit.
Watering	**First weeks:** water every 2–3 days when the top inches dry. **Established:** rarely needs water beyond rain; long droughts can drop fruit.
Soil & Mulch	Well-drained, slightly acidic soil; many soil types are fine. 2–3 in. of mulch. Ask us about Taylor's soil and mulch.
Fertilizer	**First few years only.** After that, rarely needed unless a soil test says so.
Pruning	**Late winter is best.** Shear into a dense hedge, or train into a small single-trunk tree.
Lowcountry Tip	Salt tolerant: great near the coast. Petals taste like marshmallow, and the fruit ripens from September to November.
