Planting	**Spring to fall.** Best in containers with a drainage hole; use cactus/succulent mix.
Watering	**Water sparingly:** soak, then let the soil dry before watering again.
Soil & Mulch	Fast-draining, gritty soil or cactus mix; no standing water in the saucer.
Fertilizer	**Little needed;** a light feeding in spring.
Pruning	**Remove spent flower stalks** and dead leaves.
Lowcountry Tip	Frost-tender: bring inside or cover below about 32°F. Full sun to part shade; light afternoon shade helps in peak summer heat. Keep pots out of standing water after heavy rains.
